ORBITAL DEFENSE

Tower defense on rotating orbit rings across our Solar System.

Working title · Independent developer · Playable now on web and mobile browsers

THE HOOK

Players build satellites on **rings that orbit the planet**. Because the rings rotate, defenses sweep across the sky, and timing placement matters as much as choosing it. Moons carry their own rings and pull invaders in with **gravity**, so players lure enemies into kill zones. It's familiar tower defense with a twist you can understand in one glance.

WHAT'S BUILT

- 9 worlds: all 8 planets with their real moons, plus a Solar System finale where every planet orbits the Sun
- 7 satellites × 2 specializations each; art evolves at every tier (49 designs)
- Bosses, 30-wave campaign, endless Freeplay, 3 difficulties
- Tutorial, stats screen, 10 achievements, auto-save, pinch-zoom
- Generated sound effects and music

PLATFORMS & TECH

- HTML5 / JavaScript, one codebase: web, installable phone app, iOS + Android (Capacitor), Steam (Electron)
- Platform layer already handles ads, saves and achievements (CrazyGames SDK integrated)
- Short sessions (2–20 min), works offline, portrait and landscape

BUSINESS MODEL

- Free-to-play with optional rewarded ads (bonus credits, one revive per game). Hooks already in place
- Planned: remove-ads purchase, map and satellite packs, cosmetic skins
- Premium version for Steam

LOOKING FOR

- A publishing partner for mobile (user acquisition, store launch, monetization tuning) and/or web portals
- Open to Steam publishing for an expanded version
- Player metrics (retention, tutorial completion) are being collected and can be shared on request
